

Can I explain how a baby is made?

Reproduction

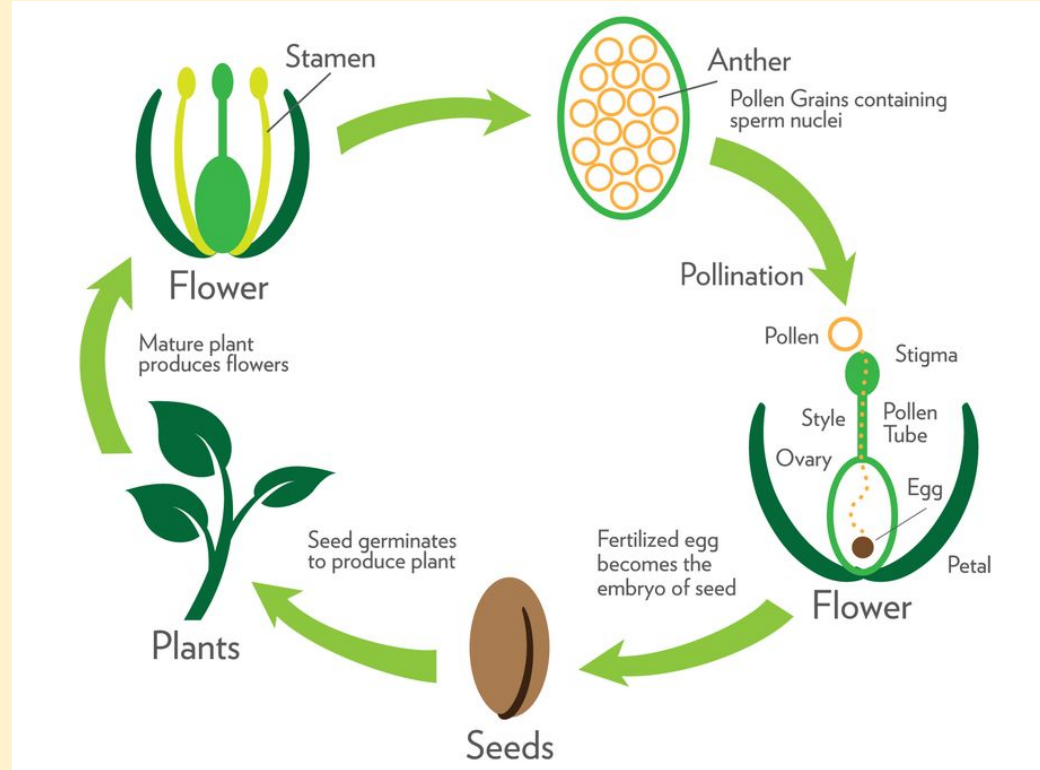

Where have we used this word before?

Can I explain how a baby is made?

We have learned about plant reproduction:

- Pollination
- Fertilisation
- Seed Dispersal
- Germination

Can I explain how a baby is made?

Humans also go through a process to reproduce.

Today, we will learn more about this.

Sperm

Egg

Womb

Fertilise

Can I explain how a baby is made?

Loving relationships

Sex is one way that adults, in different and same-sex couples, may choose to show love and care for each other, and also to feel good or close to each other.

It is also how babies are made without medical intervention.

How can people show love and care for each other?

What is meant by consent?

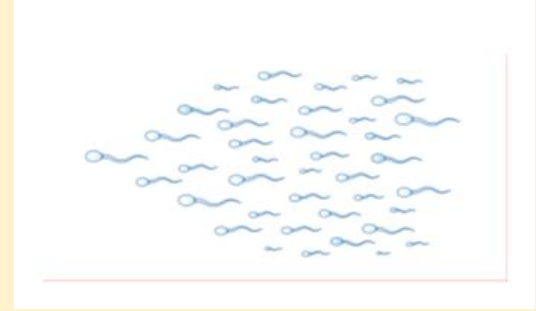

Can I explain how a baby is made?

To make anything new, the correct ingredients and conditions are needed.

Can I explain how a baby is made?

How a baby is made

With your group, put the cards in the order that explains how a baby is made through sexual intercourse.

An adult couple who are in a relationship might kiss and cuddle, get very close, and touch each other in romantic and sexual ways. They should both feel happy and comfortable doing this together.

Sometimes when a male and female person are making love together, the penis grows hard, and the vagina may get slippery. The couple may decide they want to have sexual intercourse.

This means the man's penis slides into the vagina.

The penis squirts a sticky liquid called semen into the vagina.

The cluster of eggs gradually grows inside the mother's uterus or womb and is called a foetus. It takes nine months until the baby is ready to be born.

The fertilised egg travels down the tubes to the uterus or womb. It divides into lots of different cells and settles in the womb.

If there is an egg (ovum) in one of the tubes, one of the sperm might meet it, stick on to it, and enter the egg. This means the egg is fertilised.

Millions of tiny sperm in the liquid quickly swim up inside the uterus to the fallopian tubes.

Can I explain how a baby is made?

Match the statements

A - A baby can be made by

1 - 9 months long

B - Twins are made when

2 - having sexual intercourse, or through IVF, assisted conception or surrogacy.
